

banana fertilizer recipe

Ingredients:

- Banana peels
- Water

Notes:

Recommended Proportion: use a ratio of one banana peel to one gallon of water.

Recommended Plants:

- Suitable for a wide range of fruiting and flowering plants, including roses, tomatoes, and citrus trees.
- Particularly beneficial for potassium-hungry plants or those needing a boost in overall nutrient levels.

Instructions:

1. Cut banana peels into small pieces.
2. Place the banana peels in a container and cover them with water.
3. Let the mixture sit for a few days to allow the nutrients to leach into the water.
4. Strain the liquid and dilute it with water (1:5 ratio) before using it to water your plants.

Grow, flourish, and bloom!
